PhoneBOX Solo: the small talkshow call management system with big ideas!

"A nifty all-in-one software solution to replace telco hybrid hardware and call screening software using VoIP"

Radio World's Cool Stuff Award Judges

This powerful software transforms your studio PC into a unique call routing system. The software SIP hybrid turns your soundcard into an advanced dual hybrid, with EQ, dynamics, record, playback and editing all integrated. As you would expect from Broadcast Bionics, the software is feature rich, easy to use, yet powerful and robust.

With no expensive hardware or cabling, Solo is quick and easy to install and maintain. Two versions are available – up to 6 or up to 12 lines for a single studio, with the option of adding on up to two further positions (Buddies) for a second studio and producer/screeners. A Buddy's soundcard can act as additional software hybrids if required.

You need very little to get started. Firstly you need some SIP telephone lines. These can come directly from your existing office switch if it can supply SIP extensions, alternatively a conversion gateway can be purchased to convert your existing analogue or ISDN lines to SIP. Secondly, you need a soundcard. (Ask for recommended brands). Thirdly you need a SIP handset (Ask for recommended brands.) Lastly, your PC.

Technical requirements:

Windows XP/Vista/Windows 7	SQL server 2005 Express+ (supplied)
1.8 Ghz Processor+	Soundcard(s)
1 GB RAM+	Handset

BROADCAST BIONICS

Broadcast Bionics is the author of PhoneBOX, Solo, Anywhere, the HUB, and provides bespoke software solutions to the broadcast industry. It is pleased to represent Axia, Genesys, Wide Orbit, and Newsroom in the UK.

solo

Some of the many features include:

Call Log –
See who's called and when. Drag and drop numbers back onto a line or device to call back instantly.

Directory-
Store all your valuable numbers here. Drag and drop them to onto a line or device to call them.

Icons –
The perfect visual aide to help you choose the right call to air. They're quickly interchangeable, and definable.

Caller rating function – Get the best callers on air by screening them and scoring their suitability for your show.

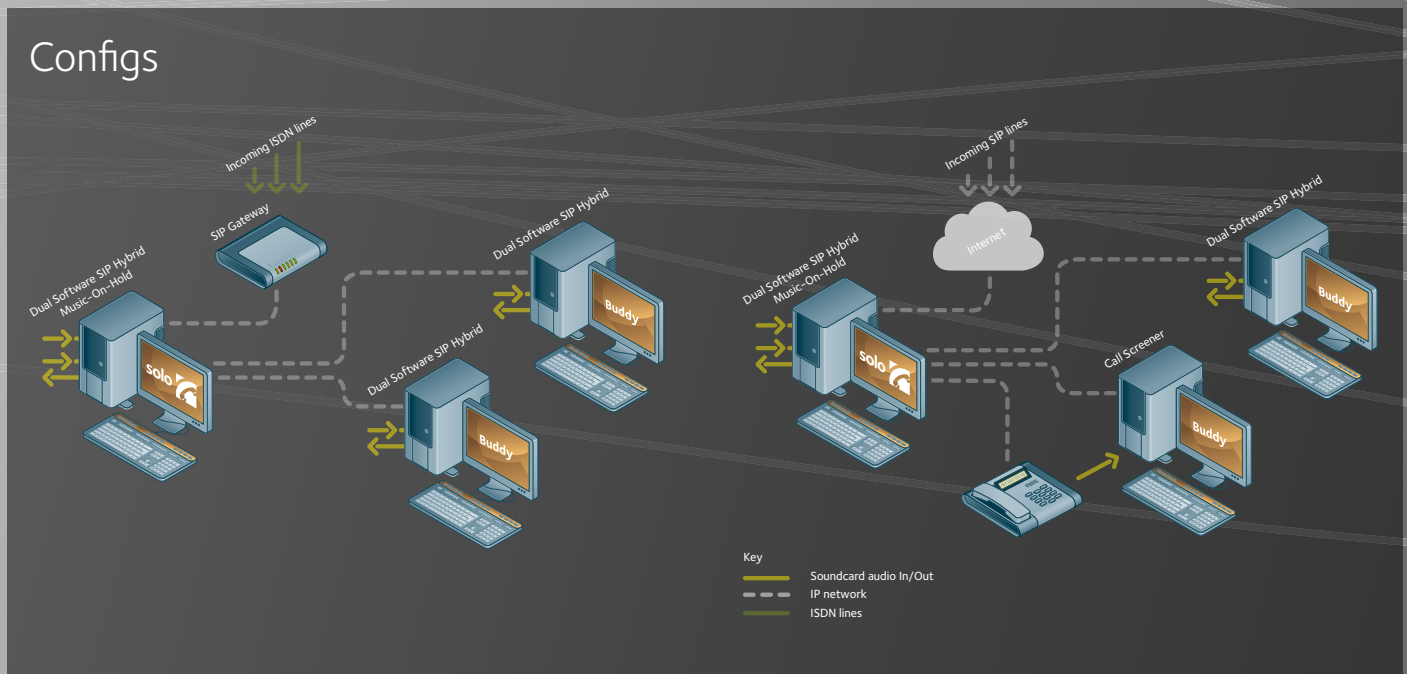

Call recording –
Every call is automatically recorded (only the last 5 are saved). Host and caller are presented on separate tracks. Use the integrated editing tool to perfect the call ready for air.

Messaging –
Instant visual talkback between workstations, for improved communication.
