# XScreen

from Broadcast Bionics

**More Control. More Features. More Functionality.  
More from your Telos hardware.**

“XScreen is, without doubt, the best and most powerful telephone system I have used. For a talk station it is awesome!”

Frank Wilcox, The Radio Network, New Zealand.

Based on the world's leading talk show software PhoneBOX, XScreen is now available for your Telos system. Its interface is clear, easy to use and displays all you need to get the best out of your callers. You'll always know where the caller is in your system – no more “lost” calls. Whether you're a self-op presenter, or your show is producer led with a team of screeners, XScreen is for you. You'll have all the information about your callers in front of you.

You'll know who your caller is, where they're calling from and why they're calling you. Plus, if your system is Livewire™ enabled, there's even built-in call recording and editing. In fact, there's a long list of features to make your life so much easier, you'll soon wonder how you managed without XScreen.

BROADCAST BIONICS

Broadcast Bionics is the author of PhoneBOX, Solo, Xscreen, Anywhere, and provides bespoke software solutions to the broadcast industry. It is pleased to represent Telos, Axia, Genesys, Wide Orbit, MusicMaster and Newsroom in the UK.

## More Control

Look how simple the interface is. Everything's in one place. Tool bar along the top, lines clearly labelled, your hybrids and desktop director handset under. An eye catching color scheme alerts you when a line is ringing, on hold, screened or on a device. Add buddies to your system and your whole team accesses the same information.

Control calls whilst browsing the net or checking emails. XScreen is the ultimate multi-tasking tool. By using a single PC for these applications, you also save valuable studio screen space.

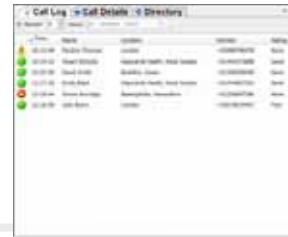

Conference multiple callers on a single device. Add or take individual callers in and out of the conference at any time. See how each caller's details are still displayed.

Dial out using XScreen. Drag and drop your favourite numbers, or dial on screen – it's so easy.

## More Features

On the right is where all your data is captured and stored. Your call log shows your recent callers, you can drag and drop them onto a device to call them back. Filter them by time or date to find that really great caller you had on a couple of days ago and get him back on air again!

Insert details about your caller in the Call Details tab, rate them, categorise them, and even add them to your directory from here too.

Store your VIP contacts in your Directory. You'll always have your list of experts to hand when you need them.

XScreen even has a "Hey, ask them that" or a "Time to go to the weather" function. Visual Talkback between each workstation!

Every call is recorded, and stored for you to go back and edit. (Livewire™ enabled systems only). Imagine – you can even take that perfect call during the ad-break and play it back, to your listeners later, you never miss a great caller.

Full XScreen package only \$750 per annum, includes software and full 24/7 support and free version upgrades.

### PC Specifications:

- 2Ghz or faster processor
